Application in tight corner...

where **THIS** wrench cannot reach...

... and here's why!

Made of Forged Alloy Steel — Heat Treated and Nickel-Chrome Plated — Fully Guaranteed

Manufactured by

NEFF ENTERPRISES, Inc.

20975 Shamrock Ave. • San Bernardino, California • Phone TURner 9-5775

Guarantee

NEFF ENTERPRISES, INC. tools are guaranteed to perform the work for which designed. Any tool found to be defective in workmanship or material, when returned to the factory with shipping charges prepaid, will be repaired, replaced, or credited at current prices (as decided by us) provided it has been used for the purposes for which designed. Any tool that has been altered from its original design, or has failed for reasons of abuse either intentional or unintentional, is not covered by this guarantee.

PROFESSIONAL QUALITY

The "Adjust-A-Box" wrench is a professional quality tool using special forged alloy steels for maximum strength, toughness, and long life. It is fully heat-treated and Nickel-Chrome plated.

USING THE WRENCH

When the nut is still fairly loose, adjust the wrench with enough clearance to easily go over the nut for repeated turnings. When the resistance indicates the nut is reaching maximum tightness, adjust the wrench tightly with the thumb for the final pull to

avoid any possible damage to the nut corners. If the nut is boxed in tightly, there is no possibility of slippage and skinned knuckles.

LONG BOLTS ARE NO TROUBLE

Because a long bolt can extend through the jaws, there is no problem such as is found with socket wrench equipment.

WORKS WITH LITTLE CLEARANCE

The "Adjust-A-Box" is particularly adapted to work where side clearance is too restricted to use a conventional adjustable or open-end wrench. It combines the strength and compactness of a socket or box wrench with the versatility of an adjustable wrench.

UTILITY

The "Adjust-A-Box" is a welcome addition to any tool kit. Its combined advantages make it an all-around utility wrench for a thousand uses. Its broad application makes it a universally useful tool for professional or amateur mechanics, home-owners, foreign car owners, maintenance men, hobbyists, boat owners, engineers, industrial plants, electricians, plumbers, machine shops—in fact—ANYONE who works with tools.
